Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Election/Restrictions

1. Examiner notes the current claims are directed towards one specific embodiment and are not presented as subcombinations or combinations or method and apparatus claims that would require a restriction/election requirement at this time. However, it is noted that amended claims could require a restriction/election in a future office action depending on responses filed.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-13 are rejected under 35 U.S.C. 102(b) as being anticipated by EP 1027954A1 (hereafter '954).

'954 teaches a machine tool and method of acquiring during machining tool and cutting information and the status of the tool to measure and estimate the tool wear (see abstract) including generating a positional command based on a predetermined NC machining program with a NC program analysis unit 11(see figure 1); carrying out the machining operation and monitoring the wear of a tool in all machining processes (see paragraph 0001 and 0016, for example); storing information on the tool, cutting condition and cutting status (see reference numbers 13, 14 and 15 of figure 1); determining the tool usability 19 and creating a tool life database 20 (see figure 1).

Art Unit: 3722

4. Claims 1-13 are rejected under 35 U.S.C. 102(b) as being anticipated by US Pat. No. 4,186,529 (Huffman).

Huffman teaches a method and apparatus which includes a numerically controlled program control over the machining operation (see col. 6, lines 50-60, for example); the numerical control of the machining is precisely controlled which monitors and records information on the tool wear (see col. 14, line 23- col. 15, line 30).

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
